## CHARACTERISTICS

### Chassis

Made of steel tube of 1.5 mm thickness.

Painted in grey RAL 7035 Micro-textured finish. Minimum thickness of the coating: 50 microns.

Frame, tubes and legs made of steel tube of 30x30 mm.

Shoe rack made of steel tubes of 20x10 mm.

Great resistance.

Feet and tubes for the coat hooks and upper rack with PVC stops.

With adjustable plug for legs

### Seat, shoe-rack, hooks and upper rack

Made with compact slats of phenolic resins (High Pressure Laminated HPL).

Rigid material, hydrophobic, antibacterial and recommended for wet areas.

Highly resistant against wear, that is why it is ideal for applications with a high index of use and frequent cleaning.

Core of black/ brown colour.

According to the european norms EN 438-1 and EN 438-2.

Density 1450 Kg/m<sup>3</sup> according to DIN 53479.

Water-absorbption of less than 3%.

Panel of 10 mm thickness.

Rounded edges.

Maintenance-free.

### Easy cleaning

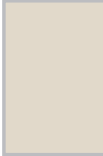

The nonporous surface repels dirt. Easy cleaning, with normal chemical detergents or with sanitizing products, against which the material is inalterable. In case of cleaning it from graffitis it can be used an organic dissolvent without risk of alteration of the colour. Resistant against food residuals and colourants, as they do not affect neither the properties nor the appearance of the HPL (phenolic material).

Steel wool or similar products, are absolutely not recommended, as they would damage the surface with scratches and so produce little stabs of corrosion. Pay special attention at the use of materials which contain chlorides, as they are contraindicated, because they cause oxidation. Hydrochloric acid or iron products in a prolonged contact are also not recommended. Do never use common steel detergents for stainless steel. **IMPORTANT:** Dry well the metal components (tubes).

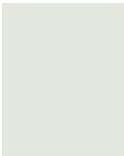

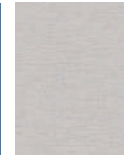

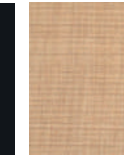

### Complements

Hooks made of zamak (Alloy of zinc with aluminium, magnesium and copper. Hardness and good mechanical resistance).
